A CRM APPLICATION FOR BANQUET HALL BOOKING

User Story:

Banquet hall booking involves the process of reserving a venue space for various events such as weddings, corporate gatherings, birthday parties, and other special occasions. This process typically begins with a client's inquiry about the availability of the banquet hall for their desired date and event type. The client discusses their event requirements including the date, expected number of guests, preferred layout, catering options, and any specific requests they may have. Based on the client's requirements, the banquet hall provides a detailed proposal outlining the available packages, pricing, inclusions, and any additional services or amenities. After the booking is confirmed, the banquet hall's event coordinator or planning team works closely with the client to plan and coordinate all aspects of the event. This includes finalizing event details, such as seating arrangements, menu selection, décor preferences, audiovisual requirements, and any other special requests. On the day of the event, the banquet hall staff ensure everything runs smoothly, troubleshoot any issues that may arise, and provide assistance to the client and their guests as needed

1. INTRODUCTION

1.1 Project Overview :

This project is to develop a comprehensive booking management system for a banquet hall business using Salesforce. The system will streamline the booking process, manage event details, and provide insights into sales and revenue. Additionally, it will include features to manage catering/menu selection, DJ services, decorations, themes related to weddings, and other marriage-related services. Implement flow to ensure data integrity and prevent double bookings.

1.2 Purpose :

The purpose of this project is to:

- Reduce manual booking errors
- Save time for customers and banquet hall staff
- Improve communication between customers and hall management
- Maintain a centralized customer database

2. IDEATION PHASE

2.1 Problem Statement (Customer Problem Statement Template)

- Customers often face difficulties in finding suitable banquet halls because information is scattered, availability is unclear, and bookings are handled manually.

- Banquet hall owners also face challenges such as:

  - Maintaining customer records manually
  - Double booking issues
  - Difficulty in tracking payments
  - Lack of automated reminders and notifications
  - Limited customer engagement and follow-up

2.2 Empathy Map Canvas

- What Customers Say :
  - "I need a banquet hall within my budget."
  - "I want to know if the hall is available on my event date."
  - "I want easy booking without visiting many places."
  - "I need quick confirmation and payment details."

- What Customers Think :
  - Will the hall be available?
  - Is the price reasonable?
  - Can I trust the booking system?

- What Customers Do
  - Search online for banquet halls
  - Compare prices and facilities
  - Contact hall managers
  - Read reviews and ratings
  - Book based on availability and budget

- What Customers Feel :
  - Confused by too many options
  - Worried about hidden charges
  - Frustrated by delayed responses
  - Happy when booking is easy and quick

2.3 Brainstorming

Brainstormed Ideas

- Online banquet hall search
- Advanced filters for location, price, and capacity
- Real-time hall availability checking
- Online payment gateway integration
- Customer feedback and review section
- SMS and email notifications
- Booking history management
- Dashboard for admin and hall owners
- Al-based recommendations for banquet halls

Selected Idea:

Salesforce-based CRM Application for Banquet hall booking

3.REQUIREMENT ANALYSIS PHASE

3.1 Customer Journey Map

Journey Stages:

- Login
- Access CRM Application
- Enter Customer Data
- Generate Orders
- Calculate Bills
- View Reports
- Decision Making

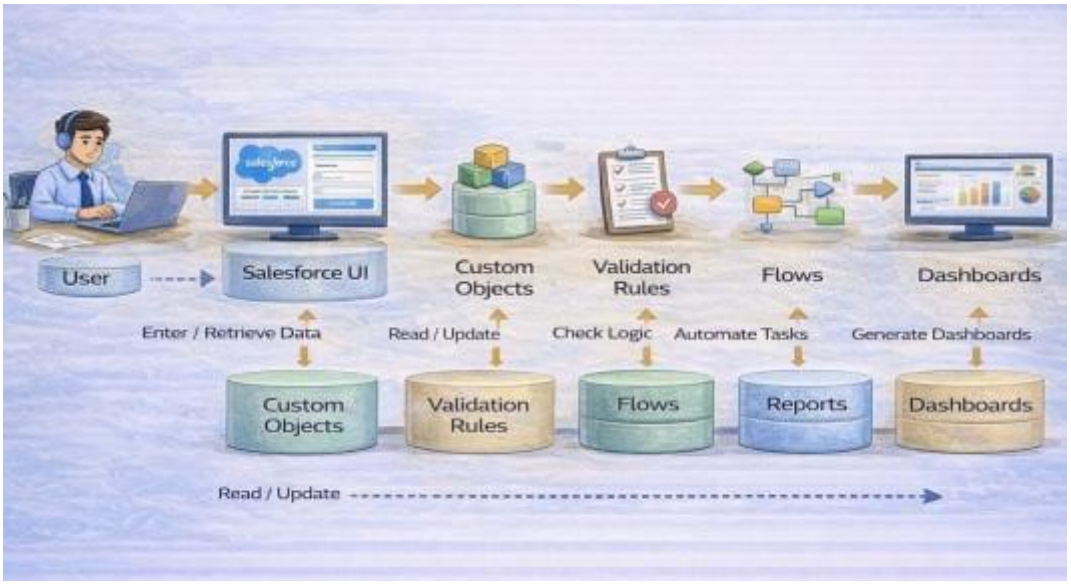
3.2 Solution Requirements

Functional Requirements

FR No	Requirement
FR-1	User Login
FR-2	Object Creation
FR-3	Data Entry
FR-4	Billing Automation
FR-5	Report Generation
FR-6	Email Automation

3.3 Data Flow Diagram

User → Salesforce UI → Custom Objects → Validation Rules → Flows → Reports → Dashboards.



3.4 Technology Stack

Layer	**Technology**
Frontend	Salesforce Lightning
Database	Salesforce Cloud
Automation	Flows
Backend	Salesforce Platform
Analytics	Reports & Dashboards

4. PROJECT DESIGN PHASE

4.1 Problem–Solution Fit

The CRM system replaces manual records with automated data management. Cloud storage prevents data loss, dashboards improve analysis, and real-time reports eliminate delays. This ensures accurate and timely business insights generation.

4.2 Proposed Solution

Functional Requirements

Parameter	**Description**
User Login & Authentication	Allows authorized users to securely log in to the CRM system using valid credentials.
Customer Record Management	Enables users to create, view, update, and delete customer details such as name, contact number, and address.
Employer & Enterprise Management	Allows management of employer and enterprise account information for business operations.
Order Management	Supports creation and tracking of customer orders, including order quantity and product details.
Automated Billing System	Automatically calculates total bill amount using formula fields based on order quantity and pricing.
Validation Rules	Ensures accurate data entry by validating fields such as phone number, PAN, and Aadhaar.
Record Types & Page Layouts	Provides different record types and layouts for various customer and enterprise categories.

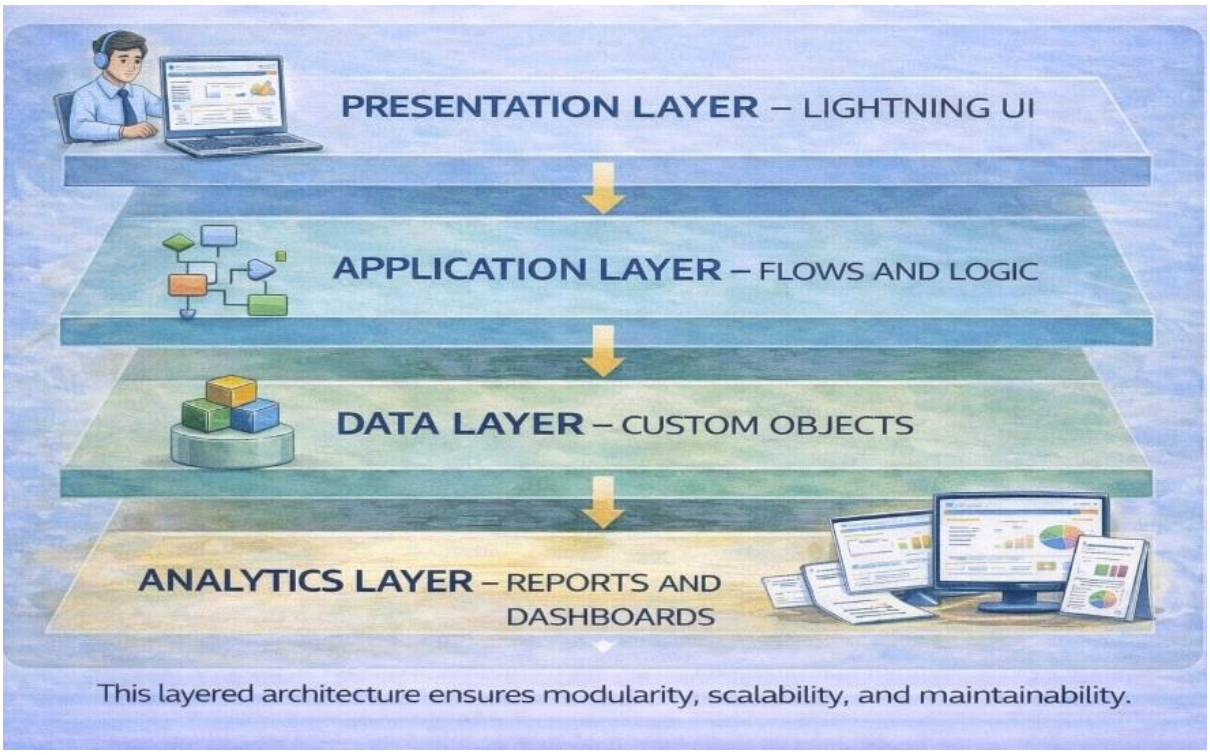
Global Picklists	Maintains standardized values for fields such as product type, category, and status.
Email Notification System	Sends automated emails to customers for birthdays, offers, and order confirmations.
Workflow & Flow Automation	Automates tasks such as updating records and triggering alerts using Salesforce Flows.
Report Generation	Generates detailed reports on sales, customers, and enterprise performance.
Dashboard Visualization	Displays real-time analytics through interactive dashboards and charts.
Data Backup & Recovery	Ensures secure storage and recovery of business data in the Salesforce cloud.
User Role Management	Controls system access using profiles and permission sets for different users.

4.3 Solution Architecture

Architecture Layers

1. Presentation Layer – Lightning UI
2. Application Layer – Flows and Logic
3. Data Layer – Custom Objects
4. Analytics Layer – Reports and Dashboards

This layered architecture ensures modularity, scalability, and maintainability.



5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

- The project followed an Agile-based development approach with defined milestones and sprints.
- A Salesforce Developer account was created to set up the development environment.
- Custom objects were designed to store customer, employer, and enterprise data.
- Custom tabs and a Lightning Application were developed for easy system navigation.
- Fields, relationships, and global picklists were configured to ensure data consistency.
- Page layouts and record types were created based on user roles and customer categories.
- Validation rules were implemented to prevent incorrect data entry.
- Email templates and automated flows were developed for customer notifications.

- Reports and dashboards were created for performance monitoring and analysis.
- Regular sprint reviews and testing were conducted to track progress and resolve issues.
- The project was completed within the planned timeline through systematic scheduling.

6. Project Development Phase:

Project Flow

Milestone 1 : Creation of developer account
Milestone 2 : Object Creation
Milestone 3 : Tabs
Milestone 4 : The Lightning App
Milestone 5 : Fields and Relationships
Milestone 6: Conclusion

What you'll learn

1. Real Time Salesforce Project
2. Standard and Custom objects
3. Picklist Value sets
4. Types of Fields & their relationships.
5. Page Layouts
6. Record Types
7. Validation Rules
8. Email Templates
9. Flows
10. Reports and Dashboards.

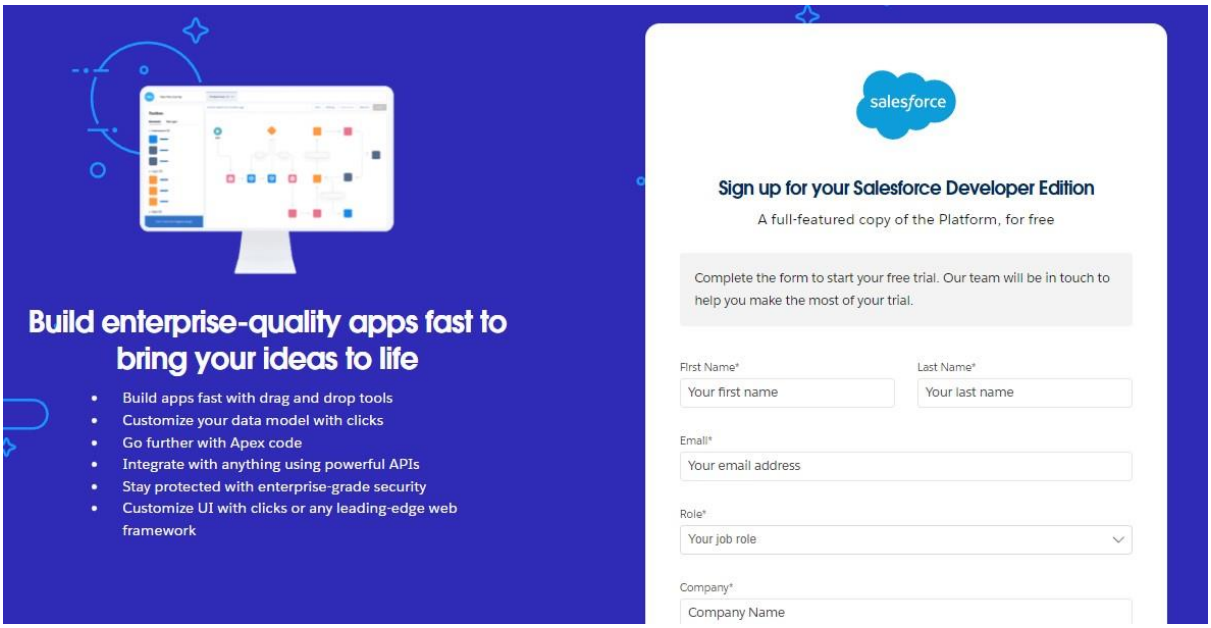
Implementation

Milestone 1 - Salesforce developer account creation :

Activity 1: Creating Developer Account:

Creating a developer org in salesforce.

1. Go to https://developer.salesforce.com/signup 2.
On the sign up form, enter the following details :

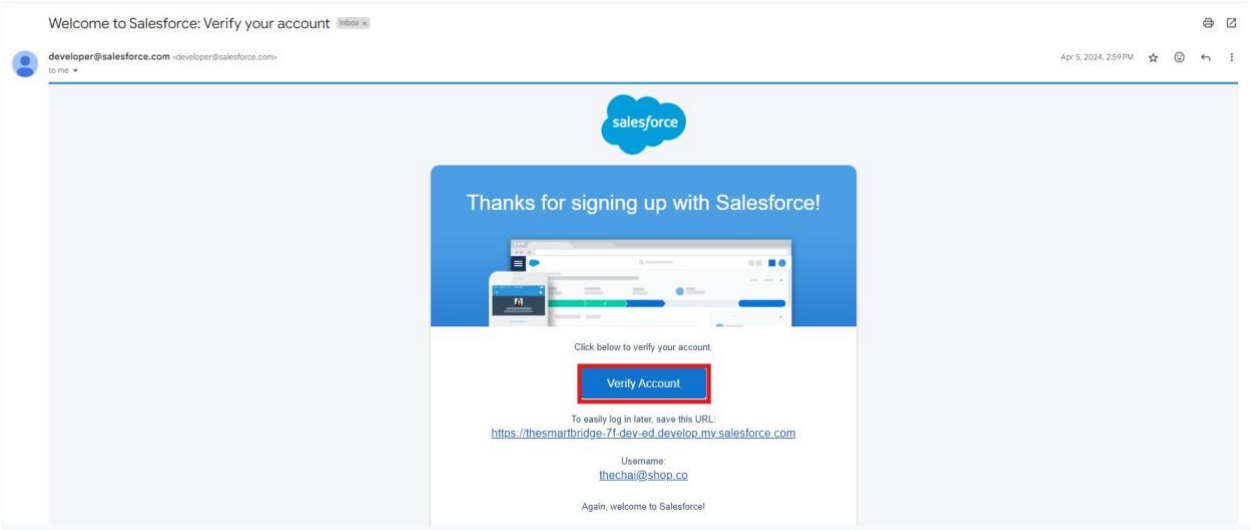


1) First name & Last name
2) Email
3) Role : Developer
4) Company : College or Company Name
5) County : India
6) Postal Code : pin code
7) Username : should be a combination of your name and company

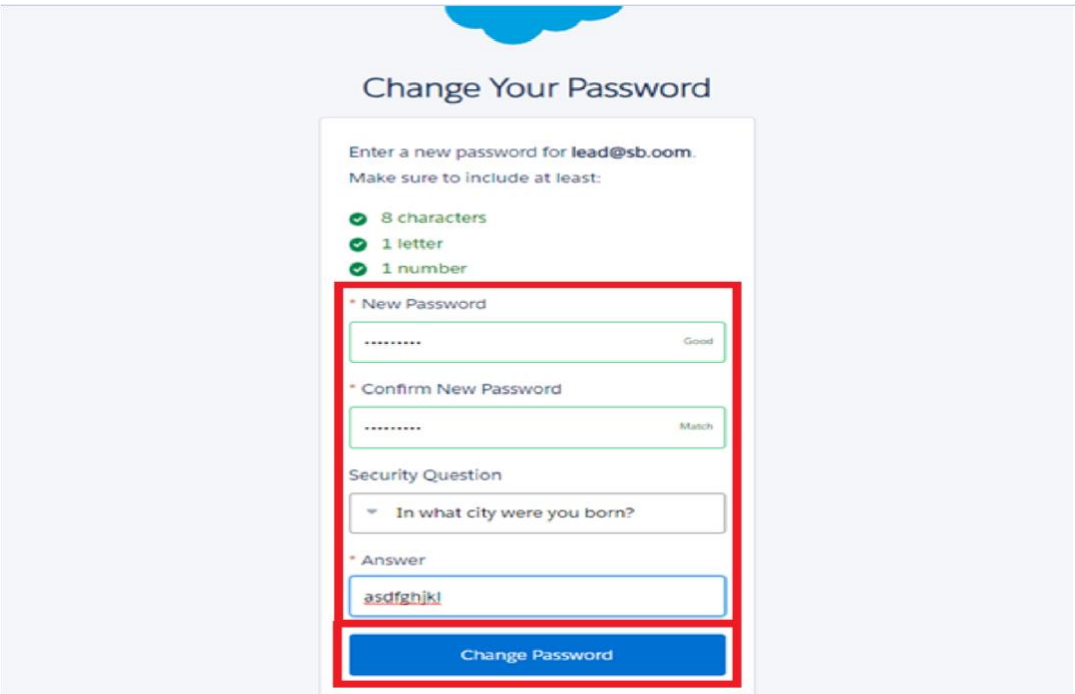
This need not be an actual email id, you can give anything in that format : username@organization.com
Click on sign me up after filling these.

Activity 2: Account Activation :

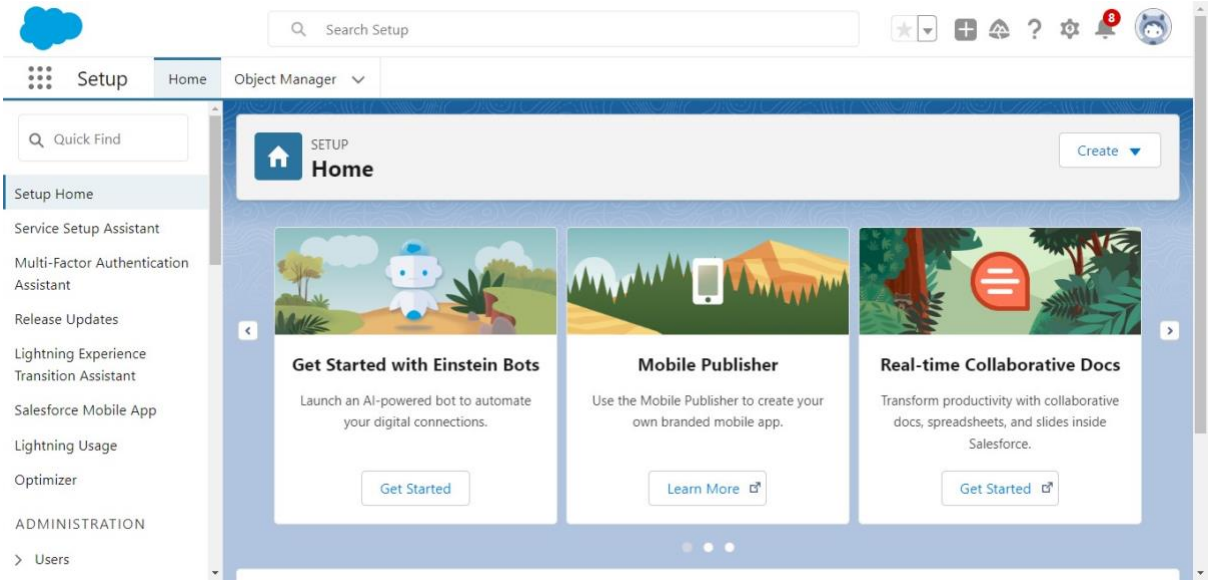
1. Go to the inbox of the email that you used while signing up. Click on the verify account to activate your account. The email may take 5-10mins.



2. Click on Verify Account.
3. Give a password and answer a security question and click on change password.

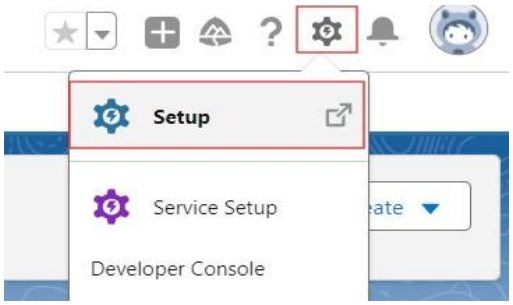


4. Then you will redirect to your salesforce setup page.

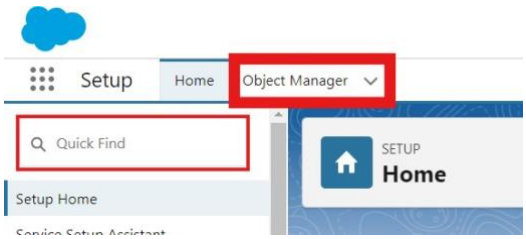


Milestone 2 - Objects

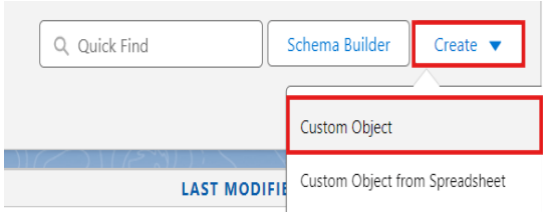
1. In your Salesforce org, click gear icon on the top left and select Setup to open Setup.



2. Click the Object Manager tab. If you don't see it, enter Object Manager in the Quick Find box.



3. On the Object Manager page, click Create | Custom Object.



Activity 1 : Creating a banquet hall

1. From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.
   - **Label** : banquet hall
   - **Plural Label** : banquet halls
   - Enter Record Name Label and Format

     Record Name : customer name

     Data Type **:** Text
   - **In Optional features :** check the boxes for Allow Reports | Allow Activities | Track Field History.
   - **Search Status :** check the box for Allow Search.
   - Save

Activity 2 : billing object

1. From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.
   - **Label** : billing
   - **Plural Label** : Billings
   - Enter Record Name Label and Format

     Record Name : Customer Account Name

     Data Type **:** Text
   - **In Optional features :** check the boxes for Allow Reports | Allow Activities | Track Field History.
   - **Search Status :** check the box for Allow Search.
   - Save

Activity 3 : staff Object

1. From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.
   - **Label** : staff
   - **Plural Label** : staffs

- Enter Record Name Label and Format
  Record Name : staff Name
  Data Type **:** Text
- **In Optional features :** check the boxes for Allow Reports | Allow Activities | Track Field History.
- **Search Status :** check the box for Allow Search.
- Save

Milestone 3 - Tabs

Activity 1 : Custom tabs creation

1. Go to setup page → type Tabs in Quick Find bar → click on tabs → New (under custom object tab)

2. Click on tabs

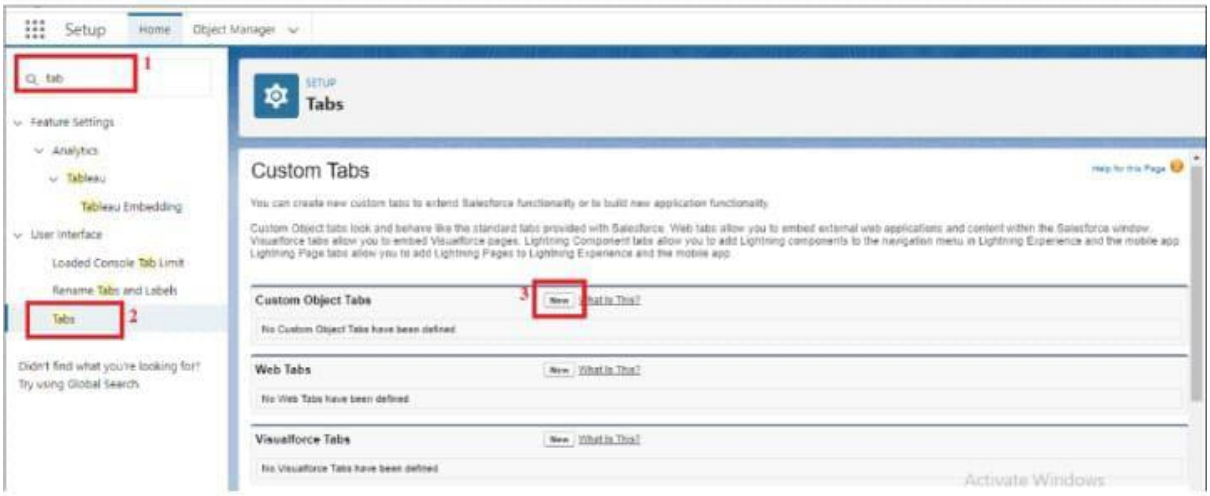
3. Click on New (under custom object tab).

4. Select Object(Banquet Hall) → Select the tab style

5. Click on Next →(Add to profiles page) keep it as default →Click on Next (Add to Custom App) uncheck the include tab .

6. Make sure that the Append tab to users' existing personal customizations is checked.

7. Click save



Milestone 4 - The Lightning App

Activity 1 : Create a lightning app

1. Go to setup page → search “app manager” in quick find → select “app manager” → click on New lightning App.

3. Enter**Banquet Hall Booking**as the App Name, then click next

4. Under App Options, leave the default selections and click next.

5. Under Utility Items, leave as is and click Next.

6. From Available Items, select**Banquet Halls, Billings, Staff, Reports, and Dashboards**and move them to Selected Item and Click Next.

7. From Available Profiles, select System Administrator and move it to Selected Profiles.

8. Click Save & Finish.

Milestone 5 : Fields & Relationships

Activity 1 : Create a picklist Field in Banquet hall

.

- Number field
- Master details relationship
- Checkbox field
- Phone field
- Archestra amount formula field
- DJ formula field
- Magician amount formula field
- Food amount
- Decoration amount formula field
- Email field

Milestone - Conclusion

In conclusion, the development of TheChaiShop&Co CRM application marks a significant stride in enhancing the store's operational efficiency and customer relationship management capabilities. Seamlessly integrating employer details, customer information (both online and offline), and enterprise data, this application streamlines business processes and enables informed decision-making. The automation of sales calculations, including order quantity and total bill amount, reduces errors and empowers employees to focus on delivering exceptional service. Moreover, automated email notifications for customers' birthdays foster personalized communication and enhance customer engagement.

7. FUNCTIONAL & PERFORMANCE TESTING

During the testing phase, screenshots were captured from the Salesforce Lightning interface to verify correct system behavior. These include:

- Record creation for Employer, Customer, and Enterprise objects
- Validation rule testing for Aadhar, PAN, and phone numbers
- Verification of record types and page layouts
- Formula field validation for order quantity and billing
- Flow execution for birthday email alerts
- Report and dashboard generation

Performance testing ensured fast response time and system stability during concurrent usage.

8. ADVANTAGES & DISADVANTAGES

Advantages

- ✓ Easy online booking process
- ✓ Saves time for customers and hall owners
- ✓ Reduces manual work and paperwork
- ✓ Prevents double booking issues
- ✓ Provides real-time hall availabilities

Disadvantages

- Requires internet connection
- Initial development cost can be high
- Payment gateway integration may have extra charges
- System failure can affect bookings
- Requires regular maintenance and updates
- Customer data security must be handled carefully
- Some users may find online booking difficult

9. Conclusion:

The CRM Application for Banquet hall booking successfully improves business operations by integrating customer data, automating billing, and enabling intelligent reporting. The system reduces errors, saves time, and enhances customer relationships through automation and analytics.

10. FUTURE SCOPE

- Mobile application development for Android and iOS
- Al-based hall recommendations
- Chatbot support for customer queries
- Integration with Google Maps for location tracking
- Virtual tour feature for banquet halls
- Multi-language support
